PROFESSIONAL SUMMARY

Microsoft Certified Fabric Data Engineer Associate (DP-700) with 1.5+ years of production experience in data engineering, building ETL/ELT data pipelines, dimensional data warehouses, and cross-platform database migrations across Azure SQL, MS SQL Server, Oracle, and Snowflake. Skilled in event-driven ingestion with Azure Data Factory, REST API and nested JSON transformation, Oracle-to-Snowflake query migration, Snowflake query performance tuning, and Python-based automation and test frameworks.

CORE SKILLS

SQL, Snowflake, Azure Data Factory (ADF), Python, ETL/ELT, Data Warehousing, Data Pipelines, Data Migration, Oracle SQL, MS SQL Server, T-SQL, Microsoft Fabric, Azure SQL, dbt, Stored Procedures, Dimensional Modeling, Star Schema, Query Optimization, REST API, JSON, Power BI

TECHNICAL SKILLS

Databases and Query Languages: SQL, T-SQL, Snowflake SQL, Oracle SQL, MySQL, Azure SQL, Stored Procedures, Common Table Expressions (CTEs), Query Optimization, SQL Performance Tuning, Query Profile Analysis

Cloud and Data Platforms: Snowflake, Microsoft Fabric, Azure Data Factory (ADF), Azure Blob Storage, Azure SQL Database, MS SQL Server

ETL/ELT and Data Integration: ETL, ELT, Data Pipelines, Pipeline Orchestration, Event-Based Triggers, Scheduled Pipelines, REST API Ingestion, JSON Parsing and Flattening, CSV and Excel Automation, dbt, Alteryx

Data Modeling and Warehousing: Data Warehousing, Dimensional Modeling, Star Schema, Fact and Dimension Tables, Staging Layers, Database Migration, Backup and Restoration

Programming and Automation: Python, pyodbc, Selenium WebDriver, Dynamic DDL Generation, Java, C/C++

Data Quality and Testing: Data Validation, Data Reconciliation, Test Automation, End-to-End Functional Testing, Streamlit Application Testing

BI and Tools: Power BI, DAX, KPI Dashboards, Looker Studio, Excel, Git, GitHub, Linux

WORK EXPERIENCE

Data Engineer I | Aykitech IT Solutions

Hyderabad, Telangana, India | May 2025 - Present

Entrepid Data Warehouse

Technologies: Azure Data Factory, Azure Blob Storage, Azure SQL, REST APIs, Stored Procedures

- Built event-driven Azure Data Factory pipelines with storage event triggers that detect, validate, and load CSV and Excel files from Azure Blob Storage into staging SQL tables, removing manual file handling.
- Developed ADF pipelines to ingest data from external REST APIs and flatten nested JSON (keys, arrays, and parent-child nodes) into structured relational tables.
- Authored and optimized modular stored procedures for multi-stage transformations, including filtering, deduplication, and data type standardization of raw staging data.
- Scheduled daily stored procedure executions in ADF to load transformed API and flat-file data into production Fact and Dimension tables (star schema), supporting enterprise reporting and analytics.

Oracle-to-Snowflake Modernization

Technologies: Snowflake, Oracle SQL, CTEs, Streamlit, Python, Selenium

- Migrated complex legacy Oracle SQL to Snowflake SQL, refactoring custom functions with correlated subqueries into modular CTEs with explicit joins, and verified 100% row-level and aggregate output parity between platforms.
- Optimized slow-running Snowflake queries using Query Profile, identifying the operators consuming the most time and restructuring query logic to reduce runtime.
- Created Snowflake validation test cases that enforce business rules and schema constraints whenever users enter data in enterprise Streamlit applications.
- Automated end-to-end functional tests with Python and Selenium WebDriver, covering user workflows, input validation rules, and database write-back in Streamlit applications.

Production Database Migration Framework
Technologies: Python, pyodbc, MS SQL Server, T-SQL, Dynamic DDL, CSV

- Designed and built an end-to-end Python framework that automates the migration of MS SQL Server databases from backup files to the Production environment.
- Restored full database backups into a staging environment and extracted tables to flat CSV files under a standardized schema_name.table_name.csv convention, preserving schema context for downstream loading.
- Implemented schema-aware provisioning with pyodbc: parsed file names to derive schema and table, created target schemas in Production SQL Server programmatically, and bulk-loaded data into matching tables.
- Built post-load reconciliation checks comparing row counts, column data types, and schema mappings between staging and Production, ensuring zero data loss.

Data Engineer Intern | Aykitech IT Solutions

Hyderabad, Telangana, India | Jan 2025 - Apr 2025

- Built and maintained automated data pipelines in Python, SQL, and Alteryx to clean, filter, and organize raw datasets for cohort analysis and operational reporting.
- Assisted in developing, testing, and documenting modular dbt data models on Microsoft Fabric and Snowflake to support analytics and data science teams.
- Partnered with cross-functional stakeholders to analyze business performance data and build interactive KPI dashboards in Power BI and Looker Studio.

PROJECTS

Tours and Travels Relational Database Management System | GitHub
Technologies: Java, Java Swing, SQL, MySQL

- Designed normalized relational schemas and wrote SQL queries to manage customer profiles, hotel reservations, cancellations, and tour packages.
- Built a desktop application interface for users and travel agencies to track itineraries, package availability, and booking history.

Gym Trainer Application | GitHub
Technologies: Java, Android Studio, Google Firebase

- Developed an Android application with Firebase Authentication and real-time NoSQL database synchronization.
- Structured low-latency data workflows for workout plans, user fitness metrics, and activity tracking.

CERTIFICATIONS

- Microsoft Certified: Fabric Data Engineer Associate (DP-700), Microsoft | Verify Credential
- Data Analytics with Microsoft Power BI, NASSCOM IT-ITeS Sector Skills Council, Sep 2024 - Dec 2024 | Verify Certificate

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science and Engineering

CSI Wesley Institute of Technology and Sciences | Hyderabad, Telangana, India | 2020 - 2024

Relevant Coursework: Database Management Systems, Data Structures and Algorithms, Software Engineering, Operating Systems
